514 Chestnut St.  
Bonham, Texas 75418

RE: 2022-23 ANNUAL BUDGET CHARGES

Dear Mr. Pate:

The 2022-23 Annual Budget was approved by the NTMWD Board of Directors at the September 2022 Board Meeting. The 2022-23 Annual Budget ensures NTMWD remains committed to our core mission of providing high quality and dependable water, wastewater and solid waste services in a cost efficient manner.

The water rate is being adjusted from \$2.99 to \$3.39 per 1,000 gallons and the excess water rate is being adjusted from \$0.60 to \$0.81 per 1,000 gallons due to higher chemical and electric power costs. Additional debt service costs for funding essential capital projects is also contributing to the overall budget increase. The City's Minimum Annual Demand is 640,000,000 gallons for 2022-23. However, the excess rate will not be applicable until consumption exceeds 670,000,000 gallons. Enclosed are the 2022-23 Budget Summary and Billing Schedule for the following charge:

- Regional Water System \$ 2,169,600.00

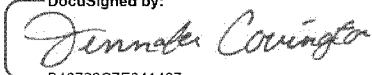

NTMWD staff continues to seek efficiencies and innovations to manage the costs of the capital program, operations and maintenance, and by working with the cities served to identify and implement effective and efficient solutions. Adequate funding and resources are required to deliver these projects on time and within budget as well as to integrate into existing system operations. The approved FY23 Budget addresses these challenges and responsibilities to continue providing safe, reliable water, wastewater and solid waste services for the millions of North Texans counting on us today and in the future.

Also enclosed is the FY23 Budget and Rates Fact Sheet. This summary provides an overview of the FY23 Budget and System Expenditures, key details and projects by services and highlights of program efficiencies and managing costs.

Mr. Sean Pate

### FAST FACTS:

**80 COMMUNITIES**  
SERVED ACROSS

**2,200 SQUARE MILES**  
IN 10 COUNTIES

**WITH A POPULATION OF**  
OF OVER 2 MILLION

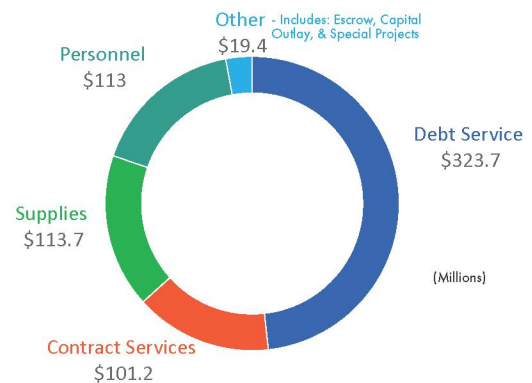

During Fiscal Year 2022, the District continued to navigate a challenging economic environment including supply chain issues and growing inflation when global events worsened the situation. Inflation began to soar to levels not seen in over 40 years with fuel and chemicals seeing some of the largest increases. The District implemented several new tactics to mitigate the unprecedented increases due to inflation, and remains in a sound financial condition. The NTMWD Board of Directors and Staff worked diligently to meet the District's contractual obligation to the participating cities and utilities with reasonable costs in all systems while maintaining our commitment to protect public health and the environment.

This summary provides an overview of the FY23 Budget and System Expenditures, some key details and projects by service, and some of the ways we are managing costs.

## FY23 Budget

All Systems Expenditures  
**\$671M**

## Expenditures By System

Major adjustments necessary in the FY23 budget include the financial impacts to address the People, Product and Planning costs driving the FY23 Annual All Systems Budget of \$671,396,165, to provide a responsible budget to sustain reliable water, wastewater, and solid waste services.

Key factors and challenges addressed in the budget include:

**People**

To meet our region's water and wastewater needs, new operating facilities are currently under construction such as Bois d'Arc Lake, the Leonard Water Treatment Plant and the Sister Grove Regional Water Resource Recovery Facility (RWRRF). The majority of new personnel requests in FY23 address the continuing growth in our service area including 16 new positions to begin staffing the Sister Grove RWRRF. The current national job market and the need to recruit and retain professional staff to operate the systems have forced the District to address labor shortages, higher turnover rates with compensation adjustments to help employees with inflationary cost of living.

**Product**

During FY22, the District was already navigating a challenging economic environment including supply chain issues and growing inflation when Russia invaded Ukraine and exacerbated the situation. Inflation soared to the highest levels in 40 years with fuel and chemicals seeing some of the largest increases with extreme volatility. Approximately half of the proposed adjustment for the Regional Water System wholesale rate is due to increased chemical costs. To mitigate this unprecedented increase in chemicals, the District conducted out-of-cycle rebids for many of the chemicals needed to meet the mission. Under new contract terms the District shifted from a historically fixed unit price to a contract that adjusts pricing quarterly based on appropriate indices.

**Planning**

Continued growth in the region has increased demands for services, and that combined with unstable construction costs has impacted the capital improvement program budget. Other major increases to the FY23 budget include funding approximately \$980 million of capital projects District-wide such as the McKinney Delivery Point No. 3 to No. 4 Pipeline (\$101M), the South Mesquite RWWTP Peak Flow Management and Expansion (\$151M), and the new Fleet Maintenance Facility (\$12M). With 55,000 new residents moving to our service area every year and the District serving two of the top 10 fastest growing counties in the country, there is an ongoing need to address the regulatory requirements, aging infrastructure and growth needs of the District.

As the nation experiences increased inflation, NTMWD has seen significantly increased construction project costs. In anticipation of continued higher pricing, we have adjusted many of our construction project budgets by approximately 18%. We have also adjusted our debt service budgets to plan for continued rising interest rates.

Despite these challenges of costs associated with People, Product and Planning for the District, NTMWD remains in a sound financial condition. The Board's goal of meeting the needs of our participating cities within state and federal laws while protecting the environment continues to be accomplished with reasonable cost in all systems.

FY23 MEMBER CITY PROPOSED WHOLESALE WATER RATE			
	FY22 Budget	FY23 Proposed	Change
<b>Variable O&amp;M</b> <small>(i.e., chemicals, power, etc.)</small>	\$ 0.60	\$ 0.81	\$ 0.21

## MORE WAYS WE ARE MANAGING COSTS

### *Financial Management*

NTMWD continues to build on its commitment to strong stewardship and transparency providing greater online access to more detailed financial data. NTMWD received recognition under the Transparency Stars program through the Texas Comptroller of Public Accounts which recognizes local governments for going above and beyond in transparency efforts. The District was awarded **the Transparency Star for Traditional Finances in 2021 and the Transparency Star for Debt Obligations in 2022**. NTMWD was also recognized by the **Government Finance Officers Association (GFOA) with its third Distinguished Budget Presentation Award**, the highest honor a public sector organization can receive for its budget document.

Growth within our region, supply chain shortages and unstable construction costs have impacted the capital improvement program budget. The District's implementation of a new financing tool, **Extendable Commercial Paper Programs (ECP) in the Regional Water System, Regional Wastewater System and Upper East Fork Interceptor System provided critical liquidity in financing capital projects as funding requirements changed in 2022**. ECP is a short-term financial instrument used to appropriate capital improvement projects. The ECP programs allow the District to appropriate capital projects without issuing long-term debt upfront and issue ECP notes as required for cash flow purposes.

The District refinanced Regional Water System bonds in FY22 which resulted in total savings of \$39.259M between 2022-2032.

The Regional Solid Waste System bond rating was upgraded by Standard & Poor's from a AA rating to a AA+ rating. The following systems also had credit rating increases by S&P from A- to A: Sabine Creek WWTP, Sabine Creek Interceptor, Parker Creek Interceptor, and Parker Creek Parallel Interceptor.

The Purchasing Department continues to implement its Competitive Bid and Proposal process. Cost avoidance is calculated by taking the total amount of all bids received and dividing by the number of bids received, then subtracting that from the awarded amount. This shows the value of going through a competitive process - FY22 Cost Avoidance \$4.45M as of August 2022.

### *Operations*

#### **Solid Waste**

**Alternate Liner System** – Both state and federal regulations require a composite liner system for landfills consisting of 2 feet of clay, a 60 mil thick HDPE geomembrane, a double-sided drainage geocomposite, and 2 feet of protective cover. NTMWD received approval from the TCEQ to replace the 2 feet of clay

with a geosynthetic clay liner (GCL). By eliminating 2 feet of clay, construction time is reduced by almost half. Also, 2 feet of additional excavation is not needed along with processing the clay. This is an additional cost savings to the construction process.

#### **Wastewater**

##### **Solids De-watering Optimization at Wilson Creek RWWTP and Current Construction Initiatives at the Rowlett Creek RWWTP**

Recently installed centrifuge de-watering equipment at Wilson Creek resulted in a 30% reduction in bio-solids hauling and removal. The centrifuges replaced Belt Filter Presses that were at the end of their service life but were also older and less efficient technology. Centrifuge equipment is being reviewed and added to other facilities based on production requirement and was most recently included as part of the Rowlett Creek RWWTP solids handling improvements.

#### **Water**

##### **Chemical Optimization at Wylie Treatment Complex**

Chemical optimization efforts resulted in a reduction of chemicals used in the coagulation process at the Wylie Treatment complex. These efforts resulted in chemical feed reduction for polymer and lime, resulting in a cost avoidance of approximately \$700,000. In addition to the budgetary savings, the need for extra maintenance associated with our lime system was reduced.

##### **Water Conveyance System Water Quality Improvements**

Implementation of operational changes to delivery point level management during lower summer demand periods has resulted in a significant reduction of field staff labor hours and total gallons of water discharged during water quality flushing efforts. Recently installed water quality testing stations in strategic locations throughout the water conveyance system have proven effective in collection of critical water quality data and supporting preemptive response to water quality maintenance activities in the water conveyance system. Blow Off Valve (BOV) improvements in multiple locations in the water conveyance system provides field staff easier access and facilitates more efficient and safe flushing practices.

#### **Energy**

##### **Energy Strategies**

Due to established energy strategies used within NTMWD energy program, the District is able to minimize the impacts of increasing energy costs. NTMWD works closely with our power utilities and retail electric providers to accurately forecast our anticipated energy needs and lock in enough fixed price blocks of power to keep our energy costs predictable and to achieve the best practical rates. In addition, the NTMWD water operation's team, with our 4 Coincident Peaks (4CP) efforts, reduces pumping in the hot peak hours of the summer months in order to help the Texas power grid and minimize NTMWD exposure to high power prices.
